

ABSTRACT

Disclosed is an artificial nail attached with an adhesion sticker having glitter, which is easily wearable and recyclable with an improved outer appearance and high adhesive strength of the sticker. As for the artificial nail for use in nail art, the adhesion sticker having a first sheet, a second sheet and a third sheet compressed together, each of which is formed by silkscreen-printing acrylic emulsion glue, is attached to a lower back end of the artificial nail. Also, the second sheet includes 4-8 wt% of the glitter based on 100 wt% of the acrylic emulsion glue. Further, the artificial nail is provided in the state of the adhesion sticker being attached to the back surface thereof, thus providing more conveniences for the user. Furthermore, after the use of the artificial nail, only the sticker attached to the back surface of the artificial nail is replaced with new ones, thereby recycling the artificial nail. In addition, the glitter is added to the adhesion sticker, whereby the improved outer appearance of the artificial nail is achieved and the generation of air bubbles in the sticker is reduced, therefore increasing the adhesive strength of the sticker.
